DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the face plate of the control box. Touching areas where high voltages are present can result in severe injury.

CAUTION

Environmental requirements

-  Use the sewing machine in an area which is free from sources of strong electrical noise such as high-frequency welders.
Sources of strong electrical noise may cause problems with correct operation.
-  Any fluctuations in the power supply voltages should be within $\pm 10\%$ of the rated voltage for the machine. Voltage fluctuations which are greater than this may cause problems with correct operation.
-  The power supply capacity should be greater than the requirements for the sewing machine's electrical consumption.
Insufficient power supply capacity may cause problems with correct operation.

-  The ambient temperature should be within the range of 5°C to 35°C during use.
Temperatures which are lower or higher than this may cause problems with correct operation.
-  The relative humidity should be within the range of 45% to 85% during use, and no dew formation should occur in any devices.
Excessively dry or humid environments and dew formation may cause problems with correct operation.
-  Avoid exposure to direct sunlight during use.
Exposure to direct sunlight may cause problems with correct operation.
-  In the event of an electrical storm, turn off the power and disconnect the power cord from the wall outlet.
Lightning may cause problems with correct operation.

Installation

-  Machine installation should only be carried out by a qualified technician.
-  Contact your dealer or a qualified electrician for any electrical work that may need to be done.

Poor thread tightening	④ Is the V-belt tension too low	Adjust so that there is 5-10mm of deflection in the V-belt when it is pushed with a finger	
	① The upper thread and lower thread tension is too strong	Adjust the thread tension	7
	② The presser foot pressure is too strong	Decrease the presser foot pressure	7~9
	③ The needle tip is broken	Replace the needle	4
	④ The needle is too thick	Use as thin a needle as possible	
	⑤ whether the adjustment of feed position is correct	consult the adjustment of feed position	8

If you notice any of the problems listed below refer to the "Remedy" column for instructions on how to solve the problem.
Our dealer or a qualified technician to carry out the necessary adjustment.

Phenomena	Possible cause	Remedy	Page
Upper line comes out of the needle hole at the sewing start	①The thread take-up lever is not at its highest position at the sewing start ② The thread end is too short for the needle hole at the sewing start ③The upper thread tension is too strong ④ upper looper fixed too high thread being take-up	Set the thread take-up lever to the highest position at the sewing start Appross50mm of thread should be coming out of the needle hole Adjust the upper thread tension adjust the position of upper looper	13
The thread comes out of the needle hole at the sewing start	①when cut thread, the bobbin is racing ②the length of base line inside bobbin is short and cannot appear base line ③the pinhole upper line is too short after cutting thread	Replace the bobbin Replace the bobbin adjust thread tension	4
The needle is broken	①When the needle is bent ②The quality of the needle is poor ③ the needle is not entirely into the needle bar ④When the needle hits the sewing hook ⑤The needle is too thin for the thread ⑥The needle hits against the throat plate ⑦ The needle hits against the presser foot	Replace the needle Select good quality needle Fully insert the needle Adjust the timing and clearance between the needle and the sewing hook and also the position of the needle guard Use a suitable needle adjust needle and needle plate position adjust needle and press foot position	10
upper line and base line cannot cut	①fixed knife and move knife are abrasion ,blunt	change fixed knife and move knife	11
upper line cannot cut	①When the needle is inserted in a wrong way ②the distance of thread tension spring is too long ③hook timing is not good to cooperate	Install the needle correctly decrease the distance of thread tension spring start in low speed and check slip stitch, revise time cooperation of hook	4
base line cannot cut	①cutting quantity cannot adjust well ②the base line is not fasten when cutting	Check the cutting quantity, adjust the left and right position of cutting thread cam, so that it can reach proper scope check whether there is base guide slot, if not, exchange hook	11
needle mark is not consistent in observe feed and reverse feed	①the slope of feed dog cannot adjust well	Adjusting the feed dog incline	9

it is not so good of face line, however the base line is good	①the face line stitch is not good · hook skin and hook case are milled thread slot, the thread still lax after fasten	change new hook skin or rub down hook case thread slot.	
	· the speed is slow when feeding and picking thread	Opening the side cover board of machine top, loosen the eccentric cam in principal axis and fasten bolt, fix up eccentric cam, turn strap wheel a little to opposite position by hand, close eccentric screw, test drive. adjust a bit till it is ok.	
	· hook case and rotating hook cooperate not good	Replace it with a new bobbin case	
	· the base line is too tight that face line cannot back	release thread tension screw, until make sure base and face line equality	7
	② face line appears broke down sometimes but sometimes is ok		
	· there is no elasticity of hook skin, thus cannot press down the thread	use new hook skin instead	
	· hook case and the thread exit of rotating hook cooperate not good	Replace it with a new bobbin case	
	· there is burr in the hole of needle plate, orientation hook	polishing them, and make sure thread go	
	①When the needle thread tension is too low	increase spring of thread tension spring and thread take-up spring	
base line is not good ,but face line is good	②the structure interact cooperation not good	Opening the side cover board of machine top, loosen the eccentric cam in principal axis and fasten bolt, fix up eccentric cam, turn strap wheel a little to opposite position by hand, (counter-clockwise)close eccentric screw, test drive. Adjust a bit till	
	③ positioning finger and rotating hook clearance is too small or there is burr	move positioning finger or polishing to solve it	
	④ the arc of rotating or set screw have burr	deal it through polish or burnish	
	⑤ needle is not aim at the middle of poisoning finger and rotating hook	adjust poisoning finger to aim the middle	
	⑥hook case and rotating hook clearance is too small or there is burr	adjust the clearance of them and polishing
